

COLIC GARD—“The Once Daily Dose for Colic Prevention”

Horses evolved as grazers—often eating fresh grass and other live plants to obtain the nutrients that they needed to be healthy. Domesticated horses are limited to the feed we provide them—often in the form of hay, grain, pelleted feeds, and/or an overgrazed pasture. The equine digestive tract was not meant to consume dry nutrients only. *COLIC GARD is an optimal blend of oils that can help keep the digestive tract lubricated so as to aid in the prevention of colic. Corn oil and other oils commonly fed to horses typically contain sub-optimal levels of omega-3--to—omega-6.*

Other Possible Health Benefits of Feeding COLIC GARD to your equine partner:

- Improved movement and athletic performance
- Prevention or alleviation of arthritis; improved joint mobility
- Decrease in inflammation throughout the body
- Thicker, fuller tail that is less likely to be brittle or break
- Improved coat shine or “bloom”
- Improved mood and memory; improved ability to concentrate
- Decrease in pain/ mood swings associated with menstrual cycle
- Better fertility in mares and stallions
- Prevention of ulcers
- Improved cardio-vascular health/ improvement in circulation
- Improvement in overall health; improved ability to utilize other vital nutrients in the equine diet
- Stronger hooves that are less prone to cracks
- Improved ability to withstand the stress of traveling and showing
- More effective immune system

COLIC GARD boasts an optimal level of omega-3--to—omega-6 fatty acids for the equine diet. Given daily, it helps keep the digestive tract healthy to aid in the prevention of colic in the horse, while providing the benefits of omega-3 fatty acids. ***Unlike other oils that boast high levels of omega-3s, COLIC GARD tastes good to the horse, is affordable, is easy to use, and has a relatively long shelf-life.*** Just 3-6 squirts/day of COLIC GARD can deliver these health benefits. ***COLIC GARD is designed by nutritional scientists and owners of performance horses.***

Dosage:

ponies/foals: 3 squirts/day

small horses: 4 squirts/day

medium-sized horses: 5 squirts/ day

large horses: 6 squirts/day
